

NAVESIDE

Official add-on for MD NAV

NAVESIDE
web solutions for MD NAV

Introduction

NAVESIDE proposes ready-to-use web solutions integrated with MD NAV Back office

There are two components which are critical for many modern businesses:

- > out-of-office access to the business-specific applications they rely upon.
- > the ability to provide their customers with real-time information (inventory status, etc.) and integrated processes (ordering, etc.).

These applications were once a competitive advantage, but they have now become essential in today's business world.

For organisations with field sales, mobile professionals, mobile service technicians or support staff, online web solutions based on Microsoft Dynamics NAV and the Naveside® platform add-on can open up new business opportunities, drive increased productivity and help to cut costs.

Naveside for Microsoft Dynamics NAV provides 3 web tools (planning, eShop, warehouse & traceability management) fully integrated with MD NAV, thus allowing Microsoft partners & customers to implement best-in-class web solutions.

With Naveside for Microsoft Dynamics NAV, your company can offer:

- an eShop solution which is fully integrated with MD NAV (customer and item cards), special and group prices, sales orders, etc.)
- a Warehouse & Traceability Management System for tracking batch numbers and posting receipts and deliveries of goods using a web interface which is optimised for PDAs and fully integrated with MD NAV (order & item tracking processes, etc.)
- a solution to help you manage the way you plan your resources (people, machines) using a web interface which is fully integrated with MD NAV (resources, customers and invoicing, etc.)

USER-FRIENDLY DESIGN INTERFACE

NAVESIDE

Our company, B-side, works to fulfil the needs of medium-sized businesses and enterprises working in the fields of trade, services and logistics.

Unlike other over-complicated semi-web interfaced products, which are merely "synchronised" with MD NAV, ours are fully web-developed, ergonomically designed and user-driven, connected direct to MD NAV through an application server.

Our customers enjoy the following benefits from using our products:

- * unrestricted Web accessibility
- * extremely simplified screens
- * reliable data access
- * real-time access to MD NAV information
- * future-proof applications

EASY TO CUSTOMIZE

NAVESIDE – Planning :

Web planning solution (interfaced with Microsoft Dynamics NAV – also available in exclusive mode)

NAVESIDE Planning is a graphical software web interface allowing you to manage your resources (people and machines), to create jobs and to generate internal orders relating to this work. Naveside - Planning has been developed entirely using a web interface and open code programming, which means that it can be very easily and quickly personalised and integrated into your ERP or any other Back Office layer.

✓ The lines show the principal resources that you need to plan for (e.g. trucks),

✓ The columns show the different days covered by the schedule

✓ **The lower left-hand table** shows a list of your customers

✓ **The lower middle table** shows a list of secondary resources (e.g. drivers),

✓ **The lower right-hand table** shows a list of accessories relating to the main resources (e.g. cable)

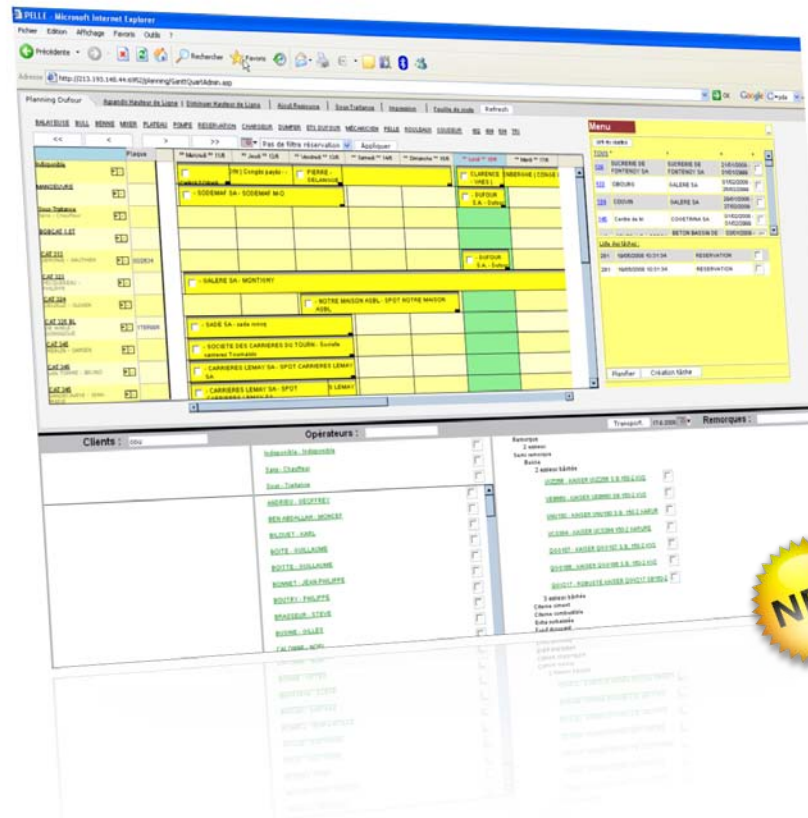

✓ The masked columns allow you to add the properties of the various main resources

✓ The categories of your principal resources are shown either as links or on drop-down menus

✓ Colour codes show you whether or not a resource is available on the date of your schedule

✓ You can automatically generate new jobs linked to the original one for other departments (e.g. location of a crane that needs be transported - the job location automatically creates a job request for the transport planner)

✓ **Web and Drag & Drop interface!** Naveside is the only planning program developed entirely using a Web interface with drag & drop browsing features!

✓ Naveside is available in 2 versions: either exclusive mode or a mode integrated with other ERP applications (MD NAV, etc.)

✓ You can print out multiple reports (task lists sorted by person or machine, organised schedule, building site statistics; etc.)

✓ Powerful functions which can be personalised

✓ Official MD NAV Add-on

USER-FRIENDLY DESIGN INTERFACE

EASY TO CUSTOMIZE

Allows your customers to order your products easily
"with just 3 clicks of the mouse"
